Watching AI model documentation: what changes, what goes quiet, and what the watcher misses

AI-generated report (cardtrack-report skill)*

Data snapshot 24 October 2026

Abstract

cardtrack is a daily tracker of first-party model and system cards, access policies and independent evaluations of frontier AI models, with additions proposed by a large language model (LLM) agent and audited by a human (systemcards.org). We analyse its first 10.9 weeks: 375 documents from 33 publishers, 836 stored versions and 27,923 link and content checks. Post-publication edits are real and worth tracking: 79 publisher-side version changes were substantive, among them 19 corrections of a stated number or fact (one propagated through 5 OpenAI documents), scope changes to access policies, and score edits and removals with no change log; 58 documents (15.5%) changed substantively within the window. The cost of finding them is that 70.2% of detected changes were page furniture or extraction artefacts, and apparent deletions must be checked against the raw capture before they are believed. Hard loss is rare: 2 of 400 documents ever returned a 404, one of them for good, too few to estimate a link-rot rate over this window. The quieter failure is a page that keeps answering HTTP 200: two pages served a redirect stub for at least 17 days, visible only to content fingerprinting until the publisher added real redirects. A host-side fault wiped out the checks of 27.5% of the daily runs, none since 22 September (Appendix B), so the change counts above are lower bounds and their detection dates run late.

1 Setting and data

Each daily run probes every tracked URL (link check), re-fetches a 15 % rotation of documents and compares a text fingerprint that ignores known page furniture such as download counters, sidebars and footers (content check), diffs publisher index pages for new links, and then lets a sandboxed LLM agent propose additions through a deterministic validator. A supervised backfill on 9 August 2026 seeded 196 documents; the snapshot covers 80 runs from 11 August to 24 October 2026, during which 211 more were discovered. The only continuous public log of edits to such documents we know of is the Midas Project's hand-curated Watchtower [1]; this study is fingerprint-based and model-centred.

2 What changes

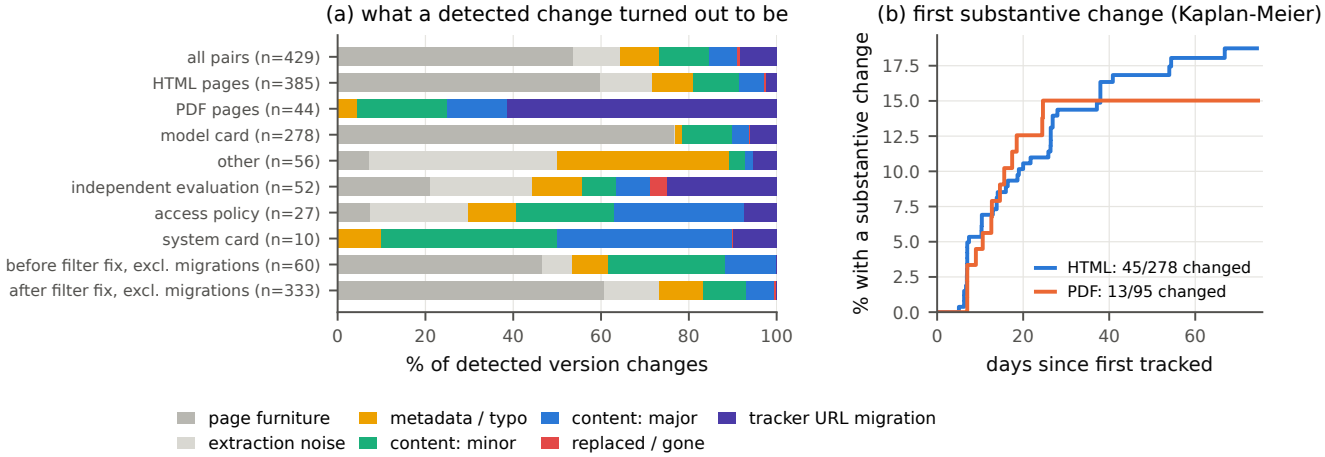

Figure 1: (a) Classification of stored version pairs by what the text diff contained (groups with ten or more pairs; the "before filter fix" row lacks the versions later deleted; see text). (b) Kaplan–Meier estimate, that is the share of documents with at least one substantive publisher-side change by day t adjusted for documents tracked fewer than t days, by the document's current format, drawn while at least 10 documents remain at risk; changes are dated at detection, and backfilled documents were already months old on day 0.

Of the 429 consecutive version pairs in the database, 36 (8.4%) are the tracker's own doing, so the diff compares two captures, not two revisions: canonical URLs migrated on 31 August from announcement pages to full PDFs, and first captures of a redirect target after a recorded move. The remaining 393 publisher-side pairs were classified by reading the text diffs (Figure 1a): 70.2% were Hugging Face download counters, evaluation-widget rows, footers

*Written by an AI agent following the cardtrack-report skill; see the disclaimer on systemcards.org/analysis for the model and skill version. Every number, table and figure is generated by `analyze.py` from a read-only snapshot of the cardtrack database. Version pairs were classified by AI sub-agents and spot-checked by the generating agent. Appendix A lists every substantive change with its URL and version ids.

or HTML extraction artefacts, 20.1% changed the document's content and 7.1% were major edits. On 31 August the fingerprint was also recomputed to ignore known furniture. This cut the per-check change-flag rate from 49.2% to 17.3% while the number of substantive pairs found did not fall (23 before, 56 after, over a longer window), so precision per flag rose from about 13.1% to 14.5%. The *before* side is incomplete: 120 versions that the changelog records as written are no longer in the database, 108 of them from before the recompute. Only 22 of them had been classified: twelve were the footnote purge described below and ten were Anthropic "Related content" teaser rotations, removed when the text layer was rebuilt on 5 October to strip that block. The cause for the other 98 is not recorded, so the *before* figures may lack pairs of any kind. In document terms, 58 of 375 tracked documents (15.5%) changed substantively during the window, an estimated 14.4% of HTML and 15.0% of PDF documents within 30 days of tracking; the two curves in Figure 1b are not distinguishable at this sample size.

The substantive changes are the reason to run a tracker at all (Table 1; Appendix A lists all 79 with URLs). Of the publisher-side pairs, 19 corrected a stated number or fact, 17 touched an evaluation number and 34 touched a safety, risk or mitigation section. Three patterns recur (Appendix A ids in brackets). First, some corrections come with dated change logs, mostly at OpenAI: one corrected number propagated with its change log into 5 OpenAI documents that quote it as a baseline (A4, A11, A14, A19, A22), and the GPT-6 Astra system card gained an appendix covering GPT-6 Sol and Luna and corrected Astra's HealthBench results after an evaluation misconfiguration, with dated entries (A50), then, with another dated entry, a second appendix on "dots", always-on agents built on Astra, with prompt-injection red-teaming and monitor-evasion results (A61); xAI added a dated log (A12), and Anthropic three: one on a research post (A42), one clarifying that its Life Sciences Verification Program form registers interest rather than taking applications (A64), and a dated correction to a post on evaluation incidents, which had wrongly said that the web-fetch URL-length limit was there to prevent SQL or command injection (A75). Second, edits without a change log exist: an NVIDIA card revised a tool-calling score downward and dropped its research-only use restriction with no note (A6), Mistral's Large 4 page changed the model's stated number of active parameters (A71), and Epoch AI appended fits for two further models to a published latency study without a revision notice (A70). Google DeepMind's Gemini 4 Argon safety report, with no revision note, limited its statement that it avoids training against its monitors to the AI control monitors, in a footnote adding that in a few early RL runs a reward-hacking penalty inadvertently took the model's thoughts as input (already disclosed in a later section); it also revised its evaluation-awareness rates and deleted "We mitigated as if at CCL regardless" from its CBRN evaluations (A77); Anthropic's Mythos page now says the company tests its models "in an effort to ensure", rather than "to ensure", that they meet its standards for safety, security and reliability (A78). A date label does not settle when an edit was made either: METR replaced a one-line pointer on its red-teaming of Anthropic's internal agent monitoring with the findings themselves, including routes to disabling monitors, under a heading dated months before the tracker's first capture, although every earlier successful content check found the page unchanged (A62).

Third, access policies change scope: OpenAI rebuilt its Daybreak cyber-access tiers to add GPT-6 Sol, Luna and Astra and to require extra approval for GPT-5.6-Cyber (A52), later let other passkeys coexist with the required hardware key (A63), and then removed the GPT-5.6-Cyber tier from its tier summary, although its access matrix still lists it, and added GPT-6.1 Sol to the matrix (A76). Anthropic's cyber-safeguards page first excluded Opus 5.5 and Sonnet 5.5 (A57), then was retitled "Cyber Verification Program" and rewritten around three access tiers covering them and Mythos 5.1 (A66); its Mythos page now says the same and no longer says access is limited to US organisations (A68), and the program page now bars using a CVP grant to build or run client-facing products, which need separate approval (A72). Model cards narrow too: NVIDIA cut each Cosmos 3 card back to a single model (A48, A49). Separately, inclusionAI added a "training content summary" linking a public training-data statement to several of its cards (A51, A53, A54, A55, A56, A60).

A caution the other way: checking the raw captures showed that apparent deletions of Anthropic footnotes were extractor artefacts. The publisher had wrapped its footnotes in an element whose class name contains "footer", which the boilerplate remover discards, while the raw HTML still held every footnote. The extractor has since been fixed and the versions it had truncated were deleted from the database (the footnote purge above). The fix did not catch every case: eleven Anthropic pages still store versions without footnotes that the raw HTML of the same captures holds. Three pages similarly lost whole tables from the extracted text while the raw HTML kept them; on two of them the publisher had rebuilt the tables from `div` elements. Checking the raw capture also overturned two apparent deletions that earlier editions reported, among them OpenAI's removal of a prompt-response table and of a named launch partner: the content is still on the page, in tab panels the extractor skipped. All of these count as extraction noise. A fingerprint tracker cannot tell disclosed from undisclosed edits, or edits from extraction bugs, but it produces the diff that lets a human tell.

3 What goes quiet

Excluding host-side outage runs and the 87 probes that never reached a server leaves 17,562 valid link checks over 400 documents (57.1 document-years, including documents later removed from the corpus), of which 95.5% succeeded. Hard loss is rare: two documents ever returned a 404 (0.04 per document-year). The monitor declared one of them dead after three consecutive 404s, a FAR.AI evaluation of the cyber safeguards of Alibaba's Qoder agent (Qwen3.8-Max); the other was a slug typo that the publisher fixed with a redirect. Two cases cannot give a

Date	Publisher: document	Kind	What changed (classifier summary)
2026-08-19	nvidia: NVIDIA-Nemotron-3.5-Lightning-30B-A3...	no change log	Added Hardware Matrix, deployment table, SGLang recipes and speculative-decoding flags. Dropped RTX 5090 from supported hardware and removed the runtime thinking-budget claim.
2026-08-22	xai: Model Card: Grok 4.6	dated correction	Revision 2026-08-17 adds changelog, PartBench, DeepSearchQA, BixBench, KernelBenchInternal v1.1, renumbered sections; corrects HackerBench, self-harm, MASK, LAB scores.
2026-08-25	tencent hunyuan: EVIE-Preview-4.5B Model Card	no change log	Card rewritten around 'Rank #1' claims: new ViDoRe V3 table with 1,792-token tier (65.36), revised V1+V2 and per-domain scores, Index Cost section.
2026-08-26	nvidia: NVIDIA Nemotron Parse 2.0 Model Card	licence	License changed from NVIDIA Open Model License Agreement to OpenMDW-1.1; third-party software notice added; Quick Start and vLLM instructions rewritten.
2026-09-06	palisade research: Language Models Can Autonomously Hac...	moved behind 200	Blog URL now serves a meta-refresh stub 'Redirecting... Click here' pointing to palisaderesearch.org/research/self-replication; article text no longer captured.
2026-09-06	palisade research: Technical Report: Shutdown Resistanc...	moved behind 200	Page body (shutdown-resistance-on-a-robot report: 3/10 physical, 52/100 simulated trials) replaced by a two-line redirect stub: Redirecting... Click here if you are not redirected.
2026-09-12	openai: GPT-6 Astra System Card	major edit	Adds Sept 9 change log; renames 8.7 to Verbalized Metagaming and Oversight Gaming, drops metric plot, adds CoT examples; Alignment section adds generalization caveats.
2026-09-24	openai: GPT-6 Astra System Card	dated correction	Added approx. 35-page Appendix A covering GPT-6 Sol and Luna. Corrected Astra HealthBench scores after a misconfiguration. Added updated alignment-eval results. Three new changelog entries dated Sept 22.
2026-09-29	google deepmind: Gemini 3.8 Audio (Live, Live Extende...	no change log	Card expanded to add Gemini 3.8 Flash TTS and Flash-Lite TTS plus Live Avatar video output; added child safety evaluations; frontier safety statement extended; Vertex AI renamed.

Table 1: Publisher-side changes selected by rule from Appendix A (edits the classifier described as undisclosed, dated corrections, pages whose content moved behind an HTTP 200, licence changes, then the largest major edit), one row per distinct change, capped per kind. Summaries are the classifier's; URLs and version ids are in Appendix A.

reliable rate over 10.9 weeks, but they are not out of line with published baselines for young pages: Pew found 8 % of pages under one year old inaccessible [2], deep links in the Wayback corpus have a median lifetime of 1.3 years [3], and 1 to 4 % of web references in scholarly articles from 2012 were already rotten when checked [4]. Moves are more common: 10 documents moved via permanent redirect (0.18 per document-year: site restructures, a trailing slash, slug fixes including the typo fix, and the soft-gone pages below). Bot blocking is the larger nuisance: 19 documents were refused with HTTP 403 at least once, 15 of them OpenAI documents on openai.com. Before 2 October the blocks came and went: after its first 403, the median document blocked by then was refused on 46.7% of its later checks up to that date, consistent with rate-based bot detection, but since 2 October every link check on `openai.com` has been refused (23 consecutive days of checks), while content re-fetches of the same pages still succeeded; whether that reflects the site or the tracker's move to a server host at the end of September is not known, and block rates depend on the fetch client's fingerprint as much as on the site [5]. The system-card PDFs on `deploymentsafety.openai.com`, which carried most of the dated corrections above, were not blocked. The quietest failures were invisible to the link checker: two pages kept returning HTTP 200 while their body became a two-line client-side redirect stub (`meta refresh` plus a canonical link to the new location), and only the content fingerprint noticed. For at least 17 days the link checker saw nothing, until the publisher replaced the stubs with real permanent redirects on 23 September and the monitor marked them moved (Table 3). This is the reference rot of Zittrain et al. [6], the URL resolving while the content is gone, although here it was temporary because the publisher had moved rather than removed the content.

4 Discovery is fast

For the 128 documents published after the backfill, the median delay from publication to first tracking was 1.3 days and 87.5% were tracked within a week. Leads from index diffs and from the monitor's own candidate queue were tracked in a median of 1.3 days; free-form agent search took 4.3 days and manual submissions 14.5 days.

5 Limitations

The window is 10.9 weeks on two hosts in turn (a laptop, then a server) with one fetch client: enough to measure short-run edit rates, not link rot, whose baselines are annual; block rates in the literature range from under 1 % for browser-like clients to 15 % for headless ones [5]. Coverage was uneven: 27.5% of the daily runs lost their checks to a host-side fault (Appendix B), which stretched the content re-check interval's tail to 13.0 days at the 90th percentile against an intended 6.7 days, and content changes are observed only when a document's turn in the 15 % rotation comes up, so change dates lag true edit dates by up to a re-check interval and edits reverted between checks are missed. The instrument changed mid-window (URL migrations and the fingerprint recompute on 31 August). The classification was done by LLM sub-agents with a written taxonomy (343 pairs at high confidence, 78 at medium, 8 at low); it was spot-checked, not double-coded, categories at the boundary of "minor" and "metadata" are soft, and text extraction can drop page elements, so apparent deletions need a check against the raw capture. The corpus is curated by an allow-list and an agent, and the literature baselines cover different populations.

6 Future work

On the science: a longer horizon allows a hazard model of edit rates by publisher and document type; aligning detected edits with publishers' change logs and with Watchtower's disclosed and undisclosed tags would estimate the disclosed fraction; classifying every minted version in the pipeline would turn the appendix into a live feed. On the instrument: re-fetch every document daily instead of a 15 % rotation with conditional requests, so edits are dated to the day; treat a body that collapses to a redirect stub as a soft 404 and re-point moved documents; extend the footnote pre-clean to the newer footnote markup, stop skipping tab panels and tables built from `div` elements, and diff the raw capture alongside the extracted text so extractor regressions are never read as deletions; extend the furniture patterns to widget rows that end in a score.

A Every substantive publisher-side change

Table 2 lists all 79 publisher-side version pairs classified as a content change (minor, major, or replaced), in order of detection, with the canonical URL and the stored version ids so the diff can be reproduced from the database (`document_versions` rows, text under `data/text/`). Detection dates lag the edit by up to one re-check interval. Table 3 lists the pages that went quiet behind an HTTP 200 and Table 4 the recorded moves.

Table 2: All substantive publisher-side changes with URL and version ids.

Id	Detected	Publisher	Document and canonical URL	Category (flags), versions	What changed (classifier summary)
A1	2026-08-17	nvidia	Cosmos 3: Omnimodal World Models for Physical AI — Cosmos3-E... https://huggingface.co/nvidia/Cosmos3-Edge	minor v55→v273	Both code examples change inference defaults: num_inference_steps 50 to 20, guidance_scale 5.0 to 6.0, flow_shift 3.0 to 12.0. Plus download count.
A2	2026-08-19	inclusion ai	Ling-3.0-tiny Model Card https://huggingface.co/inclusionAI/Ling-3.0-tiny	minor (correction) v219→v283	Activated parameter count changed from 1.3B to 1.4B (Non-emb 1.14B) in four places: intro, overview, MoE bullet, evaluation text. Download counter is furniture.
A3	2026-08-19	nvidia	NVIDIA-Nemotron-3.5-Lightning-30B-A3B-BF16 Model Card https://huggingface.co/nvidia/NVIDIA-Nemotron-3.5-Lightning-30B-A3B-BF16	major v218→v282	Added Hardware Matrix, deployment table, SGLang recipes and speculative-decoding flags. Dropped RTX 5090 from supported hardware and removed the runtime thinking-budget claim.
A4	2026-08-20	openai	GPT-5.6 — August Updates https://deploymentsafety.openai.com/gpt-5-6-august-update/gpt-5-6-august-update.pdf	minor (score, safety, correction) v10→v310	Dated Change log added: GPT-5.5 pass@4 on hard-negative protein binding corrected 0.4% to 1.48% (earlier value was pass@1); table updated; rest is reflow.
A5	2026-08-20	nvidia	Nemotron-Labs-Audex Model Card (30B-A3B and 2B) https://huggingface.co/nvidia/Nemotron-Labs-Audex-30B-A3B	minor (correction) v81→v316	Instruct-mode prefix now task-specific (text vs audio); notes the chat template targets audio, so reported text instruct results need a hand-built prompt.
A6	2026-08-20	nvidia	NVIDIA NemotronLabs VoiceChat 11B Model Card https://huggingface.co/nvidia/NVIDIA-NemotronLabs-VoiceChat-11B	minor (score, license, correction) v82→v317	The research-purposes-only use statement was deleted and the tool-calling argument accuracy was revised from 44.2% to 42.2%.
A7	2026-08-20	metr	Expenditure Horizon: Measuring Optimization Ability, with an... https://metr.org/blog/2026-07-21-expenditure-horizon/	major (score, safety, scope) v137→v322	Added approx. 200 lines: human returns on NanoGPT (approx. $2,500 per 1%), agent runs for six models with expenditure horizons $600-$3,300, maintainer mergeability review, appendices.
A8	2026-08-20	metr	Many SWE-bench-Passing PRs Would Not Be Merged into Main https://metr.org/notes/2026-03-10-many-swe-bench-passing-prs-would-not-be-merged-into-main/	minor v145→v324	Added Summary paragraph (grader overstates time horizon; trend unsupported) and seven methodological footnotes (Epoch harness lag, 2% corrupted patches, 31 pilot patches, blinding caveats).
A9	2026-08-22	poolside	Laguna S 2.1 https://huggingface.co/poolside/Laguna-S-2.1	minor (license) v254→v345	Added paragraph stating Laguna S 2.1 is released under OpenMDW-1.1, fully permissive, with paid support/optimization/indemnification options; counters changed.
A10	2026-08-22	poolside	Laguna XS 2.1 https://huggingface.co/poolside/Laguna-XS-2.1	minor (license) v255→v346	Added paragraph stating release under OpenMDW-1.1 (fully permissive, commercial use allowed) with paid support and indemnification options. Counters and widget reorder incidental.
A11	2026-08-22	openai	GPT-5.6 System Card https://deploymentsafety.openai.com/gpt-5-6/gpt-5-6.pdf	minor (score, safety, correction) v7→v348	New Aug 19, 2026 change-log entry and table fix: GPT-5.5 pass@4 on hard-negative protein binding corrected 0.4% to 1.5% (was pass@1). Rest is page-number reflow.
A12	2026-08-22	xai	Model Card: Grok 4.6 https://media.x.ai/v1/website/card-4p6-4cd2dc57.pdf	major (score, safety, correction) v236→v357	Revision 2026-08-17 adds changelog, PartBench, DeepSearchQA, BixBench, KernelBenchInternal v1.1, renumbered sections; corrects HackerBench, self-harm, MASK, LAB scores.
A13	2026-08-24	google deepmind	Gemini 3.7 Flash Model Card https://storage.googleapis.com/deepmind-media/Model-Cards/Gemini-3-7-Flash-Model-Card.pdf	minor (safety) v277→v358	Frontier Safety section changed from 'FSF Report will be published shortly' to 'is available here'.
A14	2026-08-24	openai	GPT-5.6 Preview System Card https://deploymentsafety.openai.com/gpt-5-6-preview/gpt-5-6-preview.pdf	minor (score, safety, correction) v214→v360	Added dated Change log (Aug 19, 2026) and inline note correcting GPT-5.5 pass@4 on hard-negative protein binding from 0.4% to 1.5%; table updated.
A15	2026-08-25	tencent hunyuan	UI-Mate-27B Model Card https://huggingface.co/tencent/UI-Mate-27B	major (score, scope) v280→v376	Demonstration-guided mode (description, results table, pipeline) removed and assigned to a separate UI-Mate-democua-27B checkpoint in a new checkpoint table.
A16	2026-08-25	tencent hunyuan	EVIE-Preview-4.5B Model Card https://huggingface.co/tencent/EVIE-Preview-4.5B	major (score) v281→v377	Card rewritten around 'Rank #1' claims: new ViDoRe V3 table with 1,792-token tier (65.36), revised V1+V2 and per-domain scores, Index Cost section.
A17	2026-08-25	nvidia	NVIDIA-Nemotron-3.5-Lightning-30B-A3B-BF16 Model Card https://huggingface.co/nvidia/NVIDIA-Nemotron-3.5-Lightning-30B-A3B-BF16	minor v282→v378	Added one sentence in the training-data section pointing to the Public Summary of Training Content. Download counter and eval-widget rows (Terminal-Bench 2.1 24.58) are furniture.

Id	Detected	Publisher	Document and canonical URL	Category (flags), versions	What changed (classifier summary)
A18	2026-08-25	inclusion ai	Ling-3.0-tiny Model Card https://huggingface.co/inclusionAI/Ling-3.0-tiny	minor (correction) v283→v379	Activated parameter count reverted from 1.4B (Non-emb 1.14B) back to 1.3B in the same four places. Total 7.9B unchanged.
A19	2026-08-25	openai	GPT-5.5 System Card https://deploymentsafety.openai.com/gpt-5-5/gpt-5-5.pdf	major (score, safety, correction) v8→v387	Change log dated August 19, 2026 added; GPT-5.5 pass@4 on hard-negative protein binding corrected from 0.4% to 1.48%; page numbers shifted.
A20	2026-08-26	nvidia	NVIDIA Nemotron 3 Nano Omni 30B-A3B Reasoning Model Card https://huggingface.co/nvidia/Nemotron-3-Nano-Omni-30B-A3B-Reasoning-BF16	minor v76→v398	One line added to the dataset section pointing to a Public Summary of Training Content. Remaining changes are download and Spaces counters.
A21	2026-08-26	nvidia	NVIDIA Nemotron Parse 2.0 Model Card https://huggingface.co/nvidia/NVIDIA-Nemotron-Parse-2.0	major (license) v84→v406	License changed from NVIDIA Open Model License Agreement to OpenMDW-1.1; third-party software notice added; Quick Start and vLLM instructions rewritten.
A22	2026-08-27	openai	GPT-Rosalind-5.5 System Card https://deploymentsafety.openai.com/gpt-rosalind-5-5/gpt-rosalind-5-5.pdf	minor (score, safety, correction) v31→v419	Change log (Aug 19, 2026) added: GPT-5.5 pass@4 on hard-negative protein binding corrected from 0.4% to 1.48%; table updated; rest repagination.
A23	2026-08-28	google deepmind	Gemini Omni Flash Model Card https://storage.googleapis.com/deepmind-media/Model-Cards/Gemini-Omni-Flash-Model-Card.pdf	minor (scope) v36→v432	Marked Last Updated August 2026; card now also covers Gemini Omni 1.1 Flash; removed paragraph promising T2VA/I2VA/R2VA/editing/image-gen evaluations at API rollout.
A24	2026-09-03	inclusion ai	UI-Venus-2-9B https://huggingface.co/inclusionAI/UI-Venus-2-9B	major (score, license, safety, correction) v429→v479	Result tables rebuilt with baselines and new benchmarks; safety table now OS-Harm+OSBlind; Release Status added, license pending; web claim cut to 4,000+ domains.
A25	2026-09-03	google deepmind	Gemini 3.6 Flash Model Card https://storage.googleapis.com/deepmind-media/Model-Cards/Gemini-3-6-Flash-Model-Card.pdf	minor v14→v480	Intended Usage list adds 'complex video reasoning' and replaces 'multi-week enterprise processes' with 'enterprise workflows'. No other section changed.
A26	2026-09-03	google deepmind	Gemini 3.5 Flash-Lite Model Card https://storage.googleapis.com/deepmind-media/Model-Cards/Gemini-3-5-Flash-Lite-Model-Card.pdf	minor v439→v481	Benefit and Intended Usage now lists complex video reasoning among use cases; one sentence split. Nothing else changed.
A27	2026-09-05	inclusion ai	Ling-3.0-flash Model Card https://huggingface.co/inclusionAI/Ling-3.0-flash	minor v186→v491	vLLM install instructions switched from the inclusionAI vllm-ling-v3 fork to upstream vllm-project/vllm. HF use-instructions block, counters and eval-widget rows are furniture.
A28	2026-09-05	nvidia	NVIDIA-Nemotron-3-Ultra-550B-A55B-BF16 Model Card https://huggingface.co/nvidia/NVIDIA-Nemotron-3-Ultra-550B-A55B-BF16	minor v270→v494	Training-data section gained one line pointing to a Public Summary of Training Content; rest is HF download/Spaces counters and eval-widget reordering.
A29	2026-09-05	nvidia	Cosmos 3: Omnimodal World Models for Physical AI — Cosmos3-S... https://huggingface.co/nvidia/Cosmos-3-Super	minor v54→v496	One sentence added to the training-data section pointing to a Public Summary of Training Content; download counter changed.
A30	2026-09-05	nvidia	NVIDIA-Nemotron-3-Super-120B-A12B-BF16 Model Card https://huggingface.co/nvidia/NVIDIA-Nemotron-3-Super-120B-A12B-BF16	minor v53→v495	Spec table gains Speculative Decoding row (MTP head, MTPv2 separate checkpoint); training section links NVIDIA's Public Summary of Training Content.
A31	2026-09-05	nvidia	Cosmos 3: Omnimodal World Models for Physical AI — Cosmos3-E... https://huggingface.co/nvidia/Cosmos-3-Edge	minor v273→v497	Added 'Update August 25, 2026' notice that checkpoint, runtime defaults, examples and benchmarks were updated; link to Public Summary of Training Content.
A32	2026-09-05	openai	OpenAI and Hugging Face partner to address security incident... https://openai.com/index/hugging-face-model-evaluation-security-incident/	minor (safety) v104→v499	Pending-review sentence replaced by an 'Update on August 26, 2026' linking to published findings on the Hugging Face incident.
A33	2026-09-06	palisade research	Language Models Can Autonomously Hack and Self-Replicate https://palisaderesearch.org/blog/self-replication	replaced v194→v508	Blog URL now serves a meta-refresh stub 'Redirecting... Click here' pointing to palisaderesearch.org/research/self-replication; article text no longer captured.
A34	2026-09-06	palisade research	Technical Report: Shutdown Resistance in Large Language Mode... https://palisaderesearch.org/blog/shutdown-resistance-on-robots	replaced (safety) v195→v509	Page body (shutdown-resistance-on-a-robot report: 3/10 physical, 52/100 simulated trials) replaced by a two-line redirect stub: Redirecting... Click here if you are not redirected.
A35	2026-09-06	google deepmind	Gemini 3.7 Flash Model Card https://storage.googleapis.com/deepmind-media/Model-Cards/Gemini-3-7-Flash-Model-Card.pdf	minor v441→v513	Description adds 'support for agentic video understanding'; intended use cases add 'complex video reasoning'.
A36	2026-09-09	nvidia	GR00T-H model card https://huggingface.co/nvidia/GR00T-H	minor (license) v328→v525	Header notice now labels this the N1.6 non-commercial version and points to GR00T-H-N1.7 as the commercially usable version.
A37	2026-09-10	tencent hunyuan	Hy4 preview Model Card https://huggingface.co/tencent/Hy4-preview	minor v433→v533	Deployment section dropped build-vLLM-from-source steps and the explicit vllm serve MTP command, pointing to recipes and the prebuilt image instead.
A38	2026-09-12	openai	GPT-6 Astra System Card https://deploymentsafety.openai.com/gpt-6-astra/gpt-6-astra.pdf	major (safety) v500→v551	Adds Sept 9 change log; renames 8.7 to Verbalized Metagaming and Oversight Gaming, drops metric plot, adds CoT examples; Alignment section adds generalization caveats.

Id	Detected	Publisher	Document and canonical URL	Category (flags), versions	What changed (classifier summary)
A39	2026-09-14	openai	Introducing GPT-Rosalind for life sciences research https://openai.com/index/introducing-gpt-rosalind/	major (license, safety) v465→v562	Sept 11, 2026 update: exits research preview, global trusted access, pricing from Oct 5. Removed free-credits paragraph, customer quote, and preview-terms compliance clause.
A40	2026-09-14	openai	OpenAI Daybreak: Trusted Access for Cyber — Overview https://help.openai.com/en/articles/20001258-openai-daybreak-trusted-access-for-cyber-overview	minor (safety) v466→v563	Two FAQ entries added: reduced refusals on Astra only for Daybreak Red, not Blue; Daybreak Red is org-only and not open to individual applicants.
A41	2026-09-15	deepseek	DeepSeek-V4-Flash-Vision-Exp https://huggingface.co/deepseek-ai/DeepSeek-V4-Flash-Vision-Exp	minor v473→v564	Added a 'How to Run with vLLM' section with a 4xGB300 docker serving command using DSpark speculative decoding. Widget and nav changes are furniture.
A42	2026-09-16	anthropic	An alignment assessment of recent cybersecurity incidents https://www.anthropic.com/research/alignment-assessment-cybersecurity-incidents	minor (safety, correction) v540→v579	Sept 10 correction note added; PyPI removal window changed from approx. 90 minutes to under an hour; research model penetrated one neighbor, not several. Related-content footer changed.
A43	2026-09-16	deepseek	DeepSeek-V4.1-Flash https://huggingface.co/deepseek-ai/DeepSeek-V4.1-Flash	minor v541→v580	Agentic evaluation methodology note rewritten: per-benchmark harness assignments, no-network condition for one benchmark, sampling settings stated. No score changed.
A44	2026-09-16	anthropic	Real-time cyber safeguards on Claude Opus and Sonnet https://support.claude.com/en/articles/14604842-real-time-cyber-safeguards-on-claude-opus-and-sonnet	major (safety, scope) v542→v581	Cyber Verification Program now available via 'Claude on Google Cloud' (was unavailable on Vertex); new section requires consenting to the Advanced AI Safety Addendum and setting PublisherModelConfig data-retention fields per model.
A45	2026-09-16	far ai	Revisiting Frontier LLMs' Attempts to Persuade on Extreme To... https://www.far.ai/blog/revisiting-attempts-to-persuade	major (score, safety, scope) v193→v583	Two sections added: reasoning-level effect (Gemini 3 harmful persuasion approx. 90% low vs approx. 25% high; GPT-5.1 and Opus 4.5 approx. 0%) and Gemini 3 Flash results.
A46	2026-09-23	anthropic	Introducing Claude Fable 5.1 and Claude Mythos 5.1 https://www.anthropic.com/claude-fable-and-mythos-5-1	minor (safety) v488→v605	Added methodology note: Fable scored zero on OSWorld/AutomationBench where production safeguards intervened; other cyber/bio interventions completed by Opus 4.8/Opus 5. Minor table cell formatting.
A47	2026-09-23	stepfun	StepAudio 3 Realtime Technical Report https://arxiv.org/abs/2609.14005	major v586→v608	arXiv revision v2 (19 Sep 2026) posted with a submission history added. The abstract and its scores are unchanged; the PDF shrank from 937 KB to 367 KB.
A48	2026-09-23	nvidia	Cosmos 3: Omnimodal World Models for Physical AI — Cosmos3-S... https://huggingface.co/nvidia/Cosmos3-Super	major (scope) v496→v613	Removed Cosmos3-Nano, Nano-Policy-DROID, Super-Image2Video and Super-Text2Image from Model Versions and parameter lists; card now covers Cosmos3-Super (64B) only.
A49	2026-09-23	nvidia	Cosmos 3: Omnimodal World Models for Physical AI — Cosmos3-E... https://huggingface.co/nvidia/Cosmos3-Edge	major (scope) v497→v614	Removed eight other Cosmos3 variants (Edge-Policy-DROID, Super 4-step distills, 05/31 Nano/Super release block) from model versions and parameter lists; card now Cosmos3-Edge only.
A50	2026-09-24	openai	GPT-6 Astra System Card https://deploymentsafety.openai.com/gpt-6-astra/gpt-6-astra.pdf	major (score, safety, scope, correction) v551→v620	Added approx. 35-page Appendix A covering GPT-6 Sol and Luna. Corrected Astra HealthBench scores after a misconfiguration. Added updated alignment-eval results. Three new changelog entries dated Sept 22.
A51	2026-09-25	inclusion ai	Ling-3.0-tiny Model Card https://huggingface.co/inclusionAI/Ling-3.0-tiny	minor v379→v634	vLLM install now uses upstream vllm-project/vllm instead of inclusionAI fork; added 'Training content summary' section pointing to training-content disclosure document.
A52	2026-09-26	openai	OpenAI Daybreak: Trusted Access for Cyber — Overview https://help.openai.com/en/articles/20001258-openai-daybreak-trusted-access-for-cyber-overview	major (safety, scope) v563→v646	Tier table rebuilt: Blue gives reduced refusals on GPT-5.5/5.6 Sol/GPT-6 Sol/Luna; Red adds GPT-5.5-Cyber and Astra; GPT-5.6-Cyber needs extra approval; FIDO2 key requirement added.
A53	2026-09-28	inclusion ai	Ling-2.6-1T model card https://huggingface.co/inclusionAI/Ling-2.6-1T	minor v530→v659	Added short Training content summary section linking public training-content disclosure; HF download counter changed.
A54	2026-09-28	inclusion ai	Ling-2.6-flash model card https://huggingface.co/inclusionAI/Ling-2.6-flash	minor v531→v660	Added 'Training content summary' section pointing to a public training-content disclosure document; states it does not replace docs, usage terms or license.
A55	2026-09-28	inclusion ai	Ring-2.6-1T model card https://huggingface.co/inclusionAI/Ring-2.6-1T	minor v532→v661	Added short Training content summary section linking public training-content disclosure; other changes are HF download count and eval-widget row reorder.
A56	2026-09-28	inclusion ai	Ling-3.0-flash-VL https://huggingface.co/inclusionAI/Ling-3.0-flash-VL	minor (correction) v528→v662	Context window corrected from 1M to 256K tokens in two places; dropped –mem-fraction-static serving flag; added Training content summary section pointing to disclosure document.

Id	Detected	Publisher	Document and canonical URL	Category (flags), versions	What changed (classifier summary)
A57	2026-09-29	anthropic	Real-time cyber safeguards on Claude Opus and Sonnet https://support.claude.com/en/articles/14604842-real-time-cyber-safeguards-on-claude-opus-and-sonnet	minor (safety, scope) v581→v671	Scope note now excludes Claude Opus 5.5 and Sonnet 5.5 from these cyber safeguards; says Cyber Verification Program will expand to Opus/Sonnet 5.5 and Mythos.
A58	2026-09-29	google deepmind	Gemini 3.8 Audio (Live, Live Extended Thinking) Model Card https://storage.googleapis.com/deepmind-media/Model-Cards/Gemini-3-8-Audio-Model-Card.pdf	major (safety, scope) v584→v677	Card expanded to add Gemini 3.8 Flash TTS and Flash-Lite TTS plus Live Avatar video output; added child safety evaluations; frontier safety statement extended; Vertex AI renamed.
A59	2026-09-29	redwood research	Astra is much better at reasoning with filler tokens than pr... https://blog.redwoodresearch.org/p/astra-is-much-better-at-reasoning	minor v623→v686	Added a 10-shot prompting filler-token result: Astra improves significantly and other models do not. The table is linked to LessWrong, not included.
A60	2026-10-02	inclusion ai	Ling-3.0-flash Model Card https://huggingface.co/inclusionAI/Ling-3.0-flash	minor v607→v713	Added three-line 'Training content summary' section linking a public training-content summary; states it does not replace technical docs, terms, or license.
A61	2026-10-03	openai	GPT-6 Astra System Card https://deploymentsafety.openai.com/gpt-6-astra/gpt-6-astra.pdf	major (score, safety, scope) v620→v720	New approx. 20-page Appendix B on dots (always-on GPT-6 Astra agents): prompt-injection red-teaming, alignment across time budgets, monitor evasion, preparedness, safeguards; changelog entry Sept 29.
A62	2026-10-03	metr	Red-Teaming Anthropic's Internal Agent Monitoring Systems https://metr.org/blog/2026-03-25-red-teaming-anthropic-agent-monitoring/	major (score, safety) v73→v725	Replaced one-line update pointer with new 'Results from the Exercise' section quoting monitoring bypasses, monitor jailbreaks, and attack-ideation eval (best 59% vs approx. 90% human).
A63	2026-10-05	openai	OpenAI Daybreak: Trusted Access for Cyber — Overview https://help.openai.com/en/articles/20001258-openai-daybreak-trusted-access-for-cyber-overview	major (safety) v646→v742	Added step-by-step individual Daybreak setup section; hardware-key rule relaxed so other passkeys may coexist; Bedrock 'latest aliases unavailable' note dropped.
A64	2026-10-07	anthropic	Introducing the Life Sciences Verification Program https://www.anthropic.com/news/life-sciences-verification-program	minor (correction) v590→v752	Links reworded from 'apply'/'submit an application' to 'join waitlist'/'register interest'; changelog dated Sept 30, 2026 added; related-content footer rotated.
A65	2026-10-07	mistral	Model Card: Leanstral 1.5 https://docs.mistral.ai/models/leanstral-1-5	minor v244→v753	Status changed from Public Preview to Deprecated with notice 'being phased out' and deprecation date 9/29/2026; Free price and duplicated spec block removed.
A66	2026-10-08	anthropic	Real-time cyber safeguards on Claude Opus and Sonnet https://support.claude.com/en/articles/14604842-real-time-cyber-safeguards-on-claude-opus-and-sonnet	major (safety, scope) v671→v774	Article rewritten: Cyber Verification Program now has three access tiers covering Opus 5.5, Sonnet 5.5, Mythos 5.1; new application, security, eligibility, FAQ sections.
A67	2026-10-08	google deepmind	Gemini 3.8 Audio (Live, Live Extended Thinking) Model Card https://storage.googleapis.com/deepmind-media/Model-Cards/Gemini-3-8-Audio-Model-Card.pdf	minor v677→v779	Added Gemini Enterprise Agent Platform as a distribution channel for 3.8 Flash TTS and Flash-Lite TTS; rest is re-rendered PDF page numbers.
A68	2026-10-08	anthropic	Claude Mythos https://www.anthropic.com/claude/mythos	major (safety) v678→v780	Cyber Verification Program now covers Opus 5.5, Sonnet 5.5, Mythos 5.1; US-only and 'near future' caveats removed; Life Sciences program no longer invite-only beta.
A69	2026-10-11	anthropic	Project Glasswing: Securing critical software for the AI era https://www.anthropic.com/glasswing	major (safety, scope) v463→v802	Added October 6, 2026 update: expanded Cyber Verification Program with three access tiers covering Opus 5.5, Sonnet 5.5, Mythos 5.1; Glasswing members move to Specialized tier.
A70	2026-10-11	epoch ai	Long-context latency scales quadratically for GPT-5.6 but ne... https://epoch.ai/publications/long-context-latency-scaling-gpt-vs-claude	major (score, scope) v556→v804	New Appendix H adds GPT-6 Sol and GPT-6.1 Sol TTFT measurements and fitted-coefficient table; appendix headings renamed, Code moved to Appendix I.
A71	2026-10-14	mistral	Introducing Mistral Large 4 https://mistral.ai/news/mistral-large-4/	minor (correction) v769→v829	Stated active parameter count for Mistral Large 4 silently changed from 49 billion to 52 billion.
A72	2026-10-14	anthropic	Real-time cyber safeguards on Claude Opus and Sonnet https://support.claude.com/en/articles/14604842-real-time-cyber-safeguards-on-claude-opus-and-sonnet	minor (license, safety) v774→v832	Added 'Building client-facing products' section: CVP grants cover internal security work only; productizing (e.g. running on customer code) needs separate approval.
A73	2026-10-15	stepfun	StepAudio 3 Realtime Technical Report https://arxiv.org/abs/2609.14005	major v608→v839	arXiv abstract page now lists a v3 revision (12 Oct 2026, 926 KB); abstract text unchanged, so the paper's actual changes aren't visible here.
A74	2026-10-16	redwood research	Untrusted advice for AI control: Short, strong advice signif... https://blog.redwoodresearch.org/p/untrusted-advice-for-ai-control-short	minor (safety, correction) v512→v849	TL;DR safety claim softened: 'we argue that this achieves near-maximal safety' became 'we speculate that with a sufficiently strict character limit... would achieve' it.
A75	2026-10-17	anthropic	Investigating unintended model actions in our evaluations an... https://www.anthropic.com/research/investigating-unintended-model-actions	major (safety, correction) v794→v861	Added Oct 12 correction: URL-length limits on web fetch now described as reducing data-exfiltration risk, not preventing SQL/command injection. Copy edits; related links rotated.

Id	Detected	Publisher	Document and canonical URL	Category (flags), versions	What changed (classifier summary)
A76	2026-10-18	openai	OpenAI Daybreak: Trusted Access for Cyber — Overview https://help.openai.com/en/articles/20001258-openai-daybreak-trusted-access-for-cyber-overview	major (safety, scope) v742→v869	Tier list drops the 'Red with additional model approval' (GPT-5.6-Cyber) row, though the access matrix keeps its column; Red now 'cyber models like GPT-5.5-Cyber'; GPT-6.1-Sol, Astra Minor added.
A77	2026-10-21	google deepmind	Gemini 4 Argon — Safety & Security Report https://storage.googleapis.com/deepmind-media/gemini/gemini_4_safety_report.pdf	minor (score, safety, correction) v834→v901	Footnote qualifies 'we avoid training against our monitors', citing early-RL reward-hacking penalty over thoughts (Sec. 3.4.5.2); eval-awareness rates revised; 'mitigated as if at CCL' dropped.
A78	2026-10-21	anthropic	Claude Mythos https://www.anthropic.com/claude/mythos	minor (safety) v780→v904	Safety sentence hedged: models are tested 'in an effort to ensure', not 'to ensure', they meet Anthropic's standards; announcements list reformatted.
A79	2026-10-23	metr	Early work on monitorability evaluations https://metr.org/blog/2026-01-19-early-work-on-monitorability-evaluations/	minor v589→v921	New footnote: human baseline times/estimates are for side tasks solved standalone, not within side-task setup; later footnotes renumbered 4-8 to 5-9.

Table 3: Pages whose body became a redirect stub while the URL kept returning HTTP 200, and when the tracker first recorded a real redirect (moved) or a 404 (dead) for them.

Id	Detected	Document	URL that kept returning HTTP 200	Resolved

B Tracker reliability

Of the 80 runs, 22 recorded a fetch error for every URL, the longest streak lasting 4 consecutive runs (Figure 2); the last was on 22 September, and none of the 36 runs since then was a full outage. This snapshot holds no suspend or resume events, and its run logs begin on 2 October: production moved from a laptop to a server at the end of September (repository history), and the laptop's journal and run logs are not in the snapshot, so this edition cannot match outages to resume events. Earlier editions, whose snapshots still held them, traced the outages to runs started the moment the laptop woke from suspend, before Wi-Fi was back (the timer is `Persistent=true`); the last outage coincides with a runner change that retries the run when the host wakes without network. Neither is re-checked here. An outage run still continues to its agent phase, which can succeed (9 outage runs still added documents), but that day's link and content checks are lost. A further three runs lost part of their checks, the worst 86 of 287 probes on 18 September. All 23 runs with a run log had both phases healthy. Run logs for the other 57 runs are not in the snapshot, so their agent phase is unknown ("no log" in Table 5). Outages stretched the tail of the content re-check interval. Table 5 gives every run.

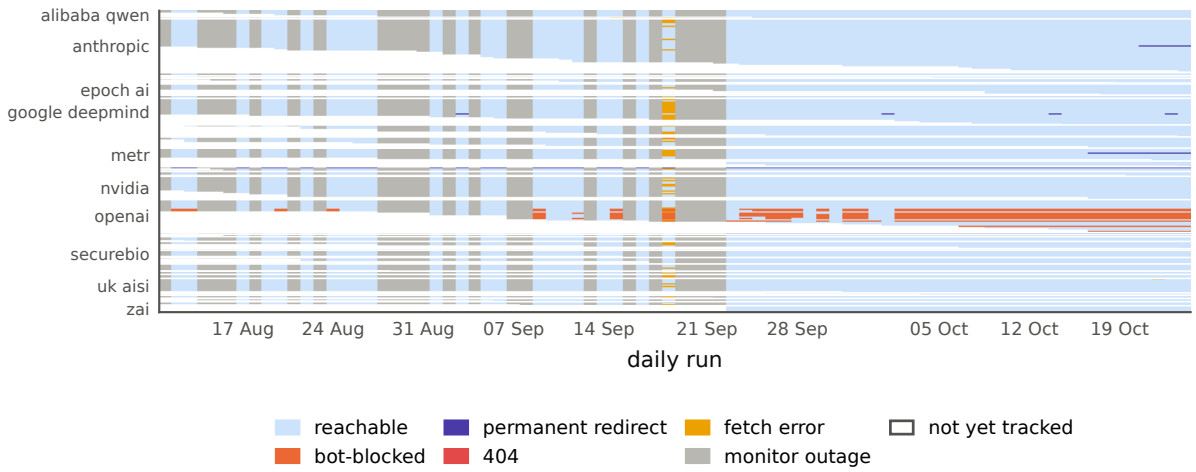

Figure 2: Link-check outcome of every tracked document (rows, grouped by publisher, ordered by date first tracked; the largest publishers labelled where space allows) in every run (columns). Grey columns: every check failed on the tracker's side; light blue: reachable; orange: HTTP 403; red: 404; violet: permanent redirect; amber: fetch error in a healthy run; white: not yet tracked.

Table 5: Every daily run: link probes and their outcomes, content checks, whether the run was a full outage, and the agent phase.

Run	Links	Reachable	Blocked	Errors	Content checks	Changed	Outage	Agent
